**Quality Score Trend (6 Months)**

## Detailed Insights & Issues

The following table highlights the top data quality issues identified during the scan. Each issue includes the affected record, error type, field value, and recommended corrective action.

| Row ID | Error Type        | Field Value    | Suggested Fix             |
|--------|-------------------|----------------|---------------------------|
| 1042   | Missing Value     | email: NULL    | Require email input       |
| 2183   | Invalid Format    | phone: 12345   | Use format: +XXX-XXX-XXXX |
| 3201   | Duplicate Entry   | user_id: U789  | Merge or remove duplicate |
| 4512   | Out of Range      | age: 250       | Validate age <= 120       |
| 5893   | Inconsistent Data | status: ACTIVE | Standardize to: ACTIVE    |

## Compliance Status

| Regulation | Status          | Notes                       |
|------------|-----------------|-----------------------------|
| GDPR       | ✓ Compliant     | All personal data encrypted |
| HIPAA      | ✓ Compliant     | PHI fields properly masked  |
| SOC 2      | ■ Review Needed | Access logs require update  |

## Recommendations

1. Implement automated email validation at data entry point
2. Add phone number format standardization rules
3. Schedule weekly duplicate detection scans
4. Update age field validation constraints (0-120 range)
5. Create data dictionary for status field values
